SAT5 RW 3.6

The following text is adapted from Herman Melville’s 1855 novel *Israel Potter*. Israel is a young man wandering through New England during the late eighteenth century.

He hired himself out for three months; at the end of that time to receive for his wages two hundred acres of land lying in New Hampshire. [...] His employer proving false to the contract in the matter of the land, and there being no law in the country to force him to fulfil it, Israel—who, however brave-hearted, and even much of a dare-devil upon a pinch, seems nevertheless to have evinced, throughout many parts of his career, a singular patience and mildness—was obliged to look round for other means of livelihood than clearing out a farm for himself in the wilderness.

Which choice best describes the function of the underlined portion in the text as a whole?

- It implies that Israel treasures a particular characteristic of his personality when that characteristic should usually be

A. regarded as a flaw.
- It suggests that if not for a certain aspect of his character, Israel might not have been as easily thwarted in his ambition

B. to establish a farm.
- It shows why Israel would not have been able to undertake the enormous amount of labor necessary to run a farm even if

C. he had owned the necessary property.
- It explains why, when the situation requires it, Israel is able to undertake courageous acts that others would generally

D. avoid.

SAT5 RW 3.7

Changes to vegetation cover and other human activities influence carbon and nitrogen levels in soil, though how deep these effects extend is unclear. Hypothesizing that differences in land use lead to differences in carbon and nitrogen levels that are not restricted to the topsoil layer (0–30 cm deep), Chukwuebuka Okolo and colleagues sampled soils across multiple land-use types (e.g., grazing land, cropland, forest) within each of several Ethiopian locations. They found, though, that across land-use types, carbon and nitrogen decreased to comparably low levels beyond depths of 30 cm.

Which choice best describes the overall structure of the text?

- It describes a phenomenon that scientists do not fully understand, explains a research team’s hypothesis about that

A. phenomenon, and then describes a finding that led the team to refine the hypothesis.
- It introduces an unresolved scientific question, presents a research team’s hypothesis pertaining to that question, and

B. then describes an observation made by the team that conflicts with that hypothesis.
- It discusses a process that scientists are somewhat unclear about, introduces competing hypotheses about that

C. process, and then explains how a research team concluded that one of those hypotheses is likely correct.
- It explains a hypothesis that has been the subject of scientific debate, discusses how a research team tested that

D. hypothesis, and then presents data the team collected that validate the hypothesis.

Text 1

Efforts to automate classification of paintings into different artistic styles have had little success, and we have probably reached the technological limit of this work. Furthermore, it's not obvious that this is even a useful endeavor—as several critics have argued, differences between artistic styles are inherently subjective and often not the best way to understand relationships between works.

Text 2

Baroque painting utilized a very similar color palette as Renaissance painting did to depict largely the same subjects that Renaissance painting depicted. Automated artistic style classifiers often struggle to draw distinctions between these two styles, but Ravneet Singh Arora and Ahmed Elgammal were able to achieve a high degree of accuracy in Baroque/Renaissance comparisons by running one classification model atop another, an approach that demonstrates how much innovation is possible in this realm.

Based on the texts, how would the author of Text 2 most likely respond to the claim in the underlined sentence of Text 1?

- A

By emphasizing that there are still advances being made in automated artistic style classification
- B

By criticizing previous research into automated artistic style classification systems for focusing on a narrow group of styles
- C

By arguing that most people are not able to correctly identify the style of paintings that they are shown
- D

By suggesting that people may eventually develop more uniform and accepted ideas about artistic styles and their boundaries

SAT5 RW 3.9

To understand how temperature change affects microorganism-mediated cycling of soil nutrients in alpine ecosystems, Eva Kaštovská et al. collected plant-soil cores in the Tatra Mountains at elevations around 2,100 meters and transplanted them to elevations of 1,700–1,800 meters, where the mean air temperature was warmer by 2°C. Microorganism-mediated nutrient cycling was accelerated in the transplanted cores; crucially, microorganism community composition was unchanged, allowing Kaštovská et al. to attribute the acceleration to temperature-induced increases in microorganism activity.

It can most reasonably be inferred from the text that the finding about the microorganism community composition was important for which reason?

- It provided preliminary evidence that microorganism-mediated nutrient cycling was accelerated in the transplanted A. cores.
- It suggested that temperature-induced changes in microorganism activity may be occurring at increasingly high B. elevations.
- C. It ruled out a potential alternative explanation for the acceleration in microorganism-mediated nutrient cycling.
- It clarified that microorganism activity levels in the plant-soil cores varied depending on which microorganisms D. comprised the community.

Mean Ratings for Patients after 21 Days

Measure	Mean rating for participants aware of taking a placebo	Mean rating for participants in the control group
Global improvement	5.0	3.9
Symptom severity reduction	92.00	46.00
Quality of life improvement	11.4	5.4

To test whether a medication is effective, scientists compare outcomes for patients taking it and patients taking a placebo (a medically inactive substance). Patients normally aren't told they're receiving a placebo, but a research team conducted a study to see if there might be a medical benefit to telling them. The team used various measures to evaluate participants, with higher ratings indicating greater well-being in each measure. Compared to the mean ratings after 21 days for participants in the control group, the mean ratings for participants who were aware of taking a placebo _____

Which choice most effectively uses data from the table to complete the statement?

- A. ranged from 5.0 to 92.00, indicating that well-being varied widely from participant to participant.
- B. were lower for two measures, with the rating for only one measure indicating greater well-being for these participants.
- C. ranged from 3.9 to 46.00, with no rating indicating greater well-being in any measure for these participants.
- D. were higher for all three measures, indicating greater overall well-being for these participants.

To investigate potential cognitive benefits of taking leave from work, psychologist Jan Packer and colleagues conducted a six-month study of Australian university staff members who took no leave from work during the study, took 2–4 days of leave, or took 1–5 weeks of leave. Tests of attentiveness were administered to participants three times during the study: at random for the no-leave staff, and for the rest, one week before their leave, one week following their return to work, and one week after the second test administration. After analyzing the results, the researchers concluded that longer leave times might not confer a greater cognitive benefit than shorter leave times do.

Which choice best describes data from the graph that support the researchers’ conclusion?

- A. In the second test administration, participants who took 2–4 days of leave had higher average attentiveness scores than did those who took no leave, but in the third test administration, those who took no leave had higher average scores than those who took 1–5 weeks of leave.
- B. In the first test administration, participants who took 2–4 days of leave had lower average attentiveness scores than did those who took 1–5 weeks of leave and those who took no leave.
- C. In both the second and third test administrations, participants who took 2–4 days of leave had higher average attentiveness scores than did participants who took 1–5 weeks of leave.
- D. In the second and third test administrations, participants who took 2–4 days of leave had higher average attentiveness scores than did those who took no leave.

Number of Lizard Species by Average Percent of Maximal Speed Used When Pursuing Prey or Escaping Predators

It may seem that the optimal strategy for an animal pursuing prey or escaping predators is to move at maximal speed, but the energy expense of exploiting full speed capacity can disfavor such a strategy even in escape contexts, as evidenced by the fact that _____

Which choice most effectively uses data from the graph to complete the text?

- most lizard species use about the same percentage of their maximal speed when escaping predation as they do when pursuing prey.
- multiple lizard species move at an average of less than 90% of their maximal speed while escaping predation.
- more lizard species use, on average, 90%–100% of their maximal speed while escaping predation than use any other percentage of their maximal speed.
- at least 4 lizard species use, on average, less than 100% of their maximal speed while pursuing prey.

The Cretaceous pterosaur *Tupandactylus navigans* is known for having an anomalously oversized head crest. Until an almost complete fossil skeleton was found in Brazil, paleontologists had been able to study only skull specimens from *T. navigans*, though it was presumed that, like other pterosaurs, the species’s primary form of locomotion was powered flight. Examining the fuller skeleton in 2016, Victor Beccari and his team determined that *T. navigans* had long hind legs, short wings, and an unusually long neck—characteristics that, combined with the creature’s large-crested head, would have made sustained flight difficult and walking upright relatively comfortable. Based on these findings the team suggests that *T. navigans* likely _____

Which choice most logically completes the text?

- A. flew for longer distances than did other pterosaur species that had oversized head crests.
- B. had longer wings than other pterosaur species considered to have been comfortable walking.
- C. had a smaller head than researchers expected based on the earlier *T. navigans* skull specimens.
- D. flew for shorter distances and spent more time walking than researchers previously thought.

SAT5 RW 3.15

Some ethicists hold that the moral goodness of an individual’s actions depends solely on whether the actions themselves are good, irrespective of the context in which they are carried out. Philosopher L. Sebastian Purcell has shown that surviving works of Aztec (Nahua) philosophy express a very different view. Purcell reveals that these works posit an ethical system in which an individual’s actions are judged in light of how well they accord with the individual’s role in society and how well they contribute to the community. To the extent that these works are representative of Aztec thought, Purcell’s analysis suggests that _____

Which choice most logically completes the text?

- the Aztecs would have disputed the idea that the morality of an individual’s actions can be assessed by appealing to
- A. standards of behavior that are independent of the individual’s social circumstances.
- the Aztecs would not have accepted the notion that the morality of an individual’s actions can be fairly evaluated by
- B. people who do not live in the same society as that individual.
- actions by members of Aztec society who contributed a great deal to their community could be judged as morally good
- C. even if those actions were inconsistent with behaviors the Aztecs regarded as good in all contexts.
- similar actions performed by people in different social roles in Aztec society would have been regarded as morally
- D. equivalent unless those actions led to different outcomes for the community.

While researching a topic, a student has taken the following notes:

- Elizabeth Catlett’s sculpture *Recognition* (1970) shows two African American figures with rounded, indistinct features.
- The figures reach out to each other in a pose that symbolizes a close, supportive relationship.
- Her sculpture *Students Aspire* (1978) shows two African American figures with sharply defined features.
- The figures hold an equal sign above their heads with one hand and embrace each other with the other hand.
- This pose symbolizes their support for each other in the pursuit of equality.

The student wants to emphasize a similarity between the two sculptures. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. Catlett’s *Students Aspire* depicts two figures supporting each other in the pursuit of equality.
- B. *Recognition* and *Students Aspire* both show African American figures in poses that symbolize supportive relationships.
- C. Catlett completed *Recognition* in 1970 and *Students Aspire* in 1978.

The figures in *Recognition* have features that are rounded and indistinct, while the figures in *Students Aspire* have sharply defined features.

While researching a topic, a student has taken the following notes:

- The US government classifies sensitive information according to the degree to which disclosure could affect the nation’s security.
- Information that could cause “damage” to national security is classified as Confidential.
- Information that could cause “serious damage” to national security is classified as Secret.
- Most routine diplomatic correspondence, if disclosed, could cause damage but not serious damage to national security.
- Diplomatic correspondence includes communication with both allies and adversaries.

The student wants to indicate which category most routine diplomatic correspondence belongs in, based on how sensitive information is classified. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- A. According to the US government, which classifies such sensitive information as routine diplomatic correspondence, Confidential information could damage national security if disclosed.
- B. Most routine diplomatic correspondence is classified according to the degree to which disclosure could affect the nation’s security.
- C. Having the potential to damage national security if disclosed, most routine diplomatic correspondence is classified as Confidential.
- D. If disclosed, communication with both allies and adversaries could affect the nation’s security.
